Lesson 2 Summary

Web browsers are a software application which allows users to use them to explore the internet. During one of the first activities, I explored the various types of browsers that we used and the first I used was Safari, developed by Apple. It is the default for all Apple devices and is tailor made for Apple users who want a quick and simple search on the internet aside from the other browsers I explored. I tried the browser Brave as I've heard of it before but never used it and when installed I noticed it was super secure and when researching it blocked ads and trackers and noticed a faster loading time due to it, As the same applied to Firefox which also allows customization like most modern browsers nowadays. The last browser I ended up testing upon my activity research was Google Chrome which can installed on any PC if it meets system requirements. It uses syncing across devices, and a massive library of extensions including Grammarly. For the second activity, I watched the videos on Learn free and learned about how each browser functioned. Afterwards, took the quiz on learnfree to test my knowledge. For my third and final activity, I used Learn Free again to read through Internet Tips. It was an informative slide show on subjects such as Hyperlinks and how they are used, URLs, Choosing an email service to fit your needs, choosing a web browser, Adobe Flash Player (R.I.P) and GIFs. It was an eye opener for me to see how browsers operate and how they fit people's certain needs as they go on and explore the internet. How I would apply this to my learning is to exporters and

use the browsers discussed above and explore them more and discover others that may have better security, customizations or features my go to google chrome doesn't have, As a studying graphic designer using different browsers is not only a good way to get out of your comfort zone but to find the one you can use to explore new setting as designers use many programs why not use many web browsers to see what features benefit each user.
